ABSTRACT

English has become the language for global communication in this 21st century with non-native speakers outnumbering native speakers. Pronunciation is among the key factors for successful and effective communication in this era of globalization. The learning and teaching of pronunciation, therefore, has been aiming at mutual intelligibility, or international intelligibility, rather than at native-like accents formerly. This paper reviewed the most recent transformations in the practice of pronunciation teaching towards international intelligibility in light of English as a Lingua Franca (ELF) (with the Lingua Franca Core (LFC)) and Global Englishes Language Teaching (GELT) in order to help learners be better prepared for global communication. Recommendations were also presented for the instruction and assessment of English pronunciation aiming at an internationally intelligible model.

Key words: teaching pronunciation, international intelligibility, ELF, LFC, GELT

1 INTRODUCTION

It could be said that recent years has seen a revolutionary change in English language teaching, in particular the teaching of pronunciation. The native-speaker model, traditionally, is what has been adopted in teaching English pronunciation, i.e. learners' main goal has been to obtain native-like competence and communicating with native speakers (Walker, 2010)¹. However, such entrenched practices in English language teaching are no longer common in today's era of globalization. Native English is hardly considered the norm or the default that all interactions and communications in English must defer to in such an emerging global era. With NSs being outnumbered by non-native English speakers (NNSs) (380-450 million native speakers out of 2.3 billion speakers of English (British Council, Crystal (2003)², and with the rise of English as a Lingua Franca^a (ELF) and Global Englishes Language Teaching^b (GELT), the nature as well as the goal of English language learning has drastically changed. The focus has been switched to flexibility, adaptation, accommodation, and the fact that "communication does not have to reflect 'native' norms" (Galloway, 2017)³.

Such an alternative to current approaches for teaching the English language has been reflected in materials development and teaching practices. Materials featuring NNSs have been introduced and incorporated into the classroom, and new teaching techniques and activities have been devised for practical use. In the field of pronunciation, theories and techniques in teaching have been developed and implemented with a view to better preparing learners for their real-life communication in lingua franca situations. While the former practice of teaching pronunciation adopted the native speaker model and thus was directed toward learners' achievement of "a native-speaker accent" (Walker, 2010, p. 28)¹, the current teaching of English pronunciation is more focused on mutual or international intelligibility. Different foci and objectives require different perspectives and practices.

This paper aimed at reviewing the latest adjustments in the teaching of English pronunciation from the perspectives of ELF and GELT. Teachers of English Language Teaching (ELT) in general and teachers of pronunciation in particular are required to be aware of and apply such in order to set proper outcomes and employ appropriate pedagogical practices. On such a basis, recommendations were presented in light of and in congruence with ELF and GELT theories.

Intelligibility

The spreads of English as an International Language (EIL), ELF, and GE all highlight the diversity in the

54 use of English, and the varieties of the English language
55 rather than rigorously adhering to native or
56 Inner-Circle norms and conventions as previously
57 seen in English as a Second Language (ESL) and English
58 as a Foreign Language (EFL). Kachru (1985) in
59 World Englishes (WE) advocated the utilization of a
60 “polymodel” approach to language teaching, encouraged
61 learners’ exposure to different Englishes, and attempted
62 to help learners improve their confidence as speakers
63 of their own variety of English.

64 Amongst such an enormous number of varieties of
65 English, however, arises a problem of mutual understanding
66 between speakers using those varieties. Gallo
67 way and Rose (2015)⁴ also articulated their concern
68 over the possibility that speakers may not understand
69 each other if they speak different varieties of English.
70 That is the reason why *intelligibility* is the primary
71 focus in both pedagogical methodology and real-life
72 communication.

73 There has been no clear scholarly consensus on the
74 definition of intelligibility (Jenkins, 2000; Walker,
75 2010)^{1,5}. The notion of intelligibility dates back to the
76 middle twentieth century with Abercrombie (1949)⁶,
77 Gimson (1962)⁷, and Voegelin and Harris (1951)’s
78 views correlating intelligibility and the ability to understand
79 other people’s speech. In addition, efforts in differentiating
80 intelligibility and similar concepts including comprehensibility,
81 communicativity, and interpretability were undertaken by
82 Bamgbose (1998)⁸, James (1998)⁹, and Smith and Nelson
83 (1985)¹⁰. A broad definition of intelligibility was proposed
84 by Derwing and Munro (1995)¹¹ – “the extent to which
85 a speaker’s message is actually understood by a listener”
86 (p. 289). This paper did not aim at reviewing the concept
87 of intelligibility and therefore adopted this definition for later
88 references. The addition of the modifiers *mutual* and
89 *international* hardly alters the meaning of the term, but
90 explicitly specifies the type of communication relevant:
91 lingua franca interactions or those between speakers of
92 different first language backgrounds.

95 As regards intelligibility it should be significant to
96 discuss the entrenched misconception that a NS status
97 absolutely guarantees being intelligible. Walker
98 (2010)¹ made a confident assertion that “native-speaker
99 accents are not, inherently, intelligible” (p. 39), affirming
100 that intelligibility is not considered a feature of the speech
101 by NSs. Levis (2022)¹² advocated this while discussing the
102 Nativeness and Intelligibility Principles, proving the
103 superiority of the latter in the present context of
104 pronunciation instruction and research. In addition, a few
105 features in native-like pronunciation such as elision and
106 weak forms, indeed,

are deemed a hindrance to mutual intelligibility, for
they could lead to incomprehensibility and misunderstanding
in ELF interactions. Research about intelligibility has
been undertaken with judgments rendered by NSs (Walker,
2010)¹ while in real-life ELF encounters NSs are not
at all times present. When participating in a communicative
activity using ELF, one should not be bothered by their
interlocutor’s first language background, but the point for
consideration is how to achieve intelligibility and communication
success.

A Brief Overview of English Pronunciation Instruction

Pronunciation instruction received limited attention
both in academic research and pedagogical practice
(Baker & Murphy, 2011)¹³. A study by MacDonald
(2002)¹⁴ revealed that pronunciation was a neglected
area in teachers’ practice due to several factors ranging
from lack of training and knowledge to “poorly articulated
... policies and curriculum objectives” (Baker & Murphy,
2011, p. 34)¹³. A thorough investigation of popular
teaching and learning materials would also indicate that
pronunciation was not as much of a focus as other aspects
and skills of the English language, for most coursebook
activities prioritize skills development as well as grammatical
and lexical accuracy.

There has been seen, nevertheless, a major change
in research- and practice-based literature that highlights
the issues of pronunciation teaching, which is a direct
outcome of learners’ actual need for global communication.
Such studies are enlightened by the theories of EIL, ELF,
and GELT, which suggests that following the “static native
norms” is not helpful in today’s global context requiring
learners to use English for global/lingua franca communication
(Galloway, 2017, p. 15)³. This reconceptualization of
English and ELT pedagogy is reflected in the way materials
have been developed, novel teaching activities and
techniques introduced, and academic ELT discussions
and platforms generated.

The goal of pronunciation teaching, as endorsed by a
variety of ELT practitioners and experts, is to make
learners intelligible to a variety of speakers of different
language and culture backgrounds (Jenkins, 2000;
Levis, 2018; Walker, 2010)^{1,5,15}. ELF speakers are
encouraged not to reduce their local and/or national
accents, and not to bother attaining native-speaker
competence (unless when learners insist on doing so) in
order to maintain their personal/national identity and
communicate with more confidence. As mentioned
above, achieving a native-like accent is unrealistic and

158 inappropriate for the majority of learners, and such
 159 a failure could evoke feelings of frustration, insecur-
 160 ity, and inferiority, whereas being able to keep their
 161 accents and maintaining intelligible is perceived as
 162 not only a source of motivation for language learning
 163 but also confidence builder in global communication.
 164 Moreover, it is believed that ELF users (and certainly
 165 learners), in their interactions, try to make optimum
 166 use of their linguistic resources with a view to effective
 167 and successful communication.
 168 Unfortunately, however, a shift in focus in pronun-
 169 ciation instruction has not been welcomed by all stake-
 170 holders. From a personal experience in teacher-
 171 training courses that the writer has undertaken, it
 172 could be said that reluctance to accept changes and
 173 doubt will arise when ELF and/or intelligibility is in-
 174 troduced. Since the first day of their English learn-
 175 ing journey, teachers, student teachers, and learners
 176 have been exposed to the two varieties of British En-
 177 glish and American English, which are (unjustly) con-
 178 sidered ‘standard English’, and the desire to acquire
 179 a native speaker competence is found in mostly ev-
 180 ery learner regardless of their level of language pro-
 181 ficiency. Feelings of uncertainty and possibly failure
 182 afterwards are unavoidable if both learners and teach-
 183 ers have to depart from what they have believed is *the*
 184 *norm*. Therefore, ELF and ELF-informed pronun-
 185 ciation instruction with a shifted goal to international
 186 intelligibility should be more widely implemented in
 187 both language classrooms and teacher-training pro-
 188 grams in the context of Vietnam.

189 **Materials for Pronunciation Instruction**

190 Only recently have interests in materials pronun-
 191 ciation been stimulated (Levis & Sonsaat, 2016)¹⁶. Ex-
 192 perts and researchers in the field of materials devel-
 193 opment have voiced their opinions that both teach-
 194 ing and materials should incorporate the “global di-
 195 versity of English” (Cogo, 2022, p. 96)¹⁷. However,
 196 publishers – whether global or local/national – have
 197 been reluctant in their attitudes and actions. Materi-
 198 als in general and general-skills textbooks in particu-
 199 lar have been rather limited in their ELF/GE-oriented
 200 methodology. According to Cogo (2022)¹⁷, the ma-
 201 jority of commercial materials share the following
 202 three issues: orientation towards NS norms – in both
 203 language and culture, orientation towards monolin-
 204 gualism (rather than the diversity of English and mul-
 205 tilingualism), and detachment from local contexts
 206 (rather than intercultural awareness).
 207 Matsuda (2002)¹⁸, in a similar manner, upheld the
 208 representation of uses and users of global English in

materials, formulating the five questions or criteria
 that teachers and materials developers need to ask for
 materials evaluation:

- Which variety of English is the material based on? Is it the variety my students should learn?
- Does it provide adequate exposure to other varieties of English and raise enough awareness about the linguistic diversity of English?
- Does it represent a variety of speakers?
- Whose cultures are represented?
- Is it appropriate for local contexts?

In answering such questions, teachers should “dare to adapt their resources and look for their own answers regarding appropriate practices in their contexts” (Cogo, 2022, p. 99)¹⁷. Even though these criteria focus on general-skills English materials, they are a supportive indication of pronunciation materials that do not merely adopt native norms or follow a monolingual approach.

Levis and Sonsaat (2016)¹⁶ were vocal in advocating the development and adoption of ELF/GE-aware pronunciation materials, formulating the three principles: emphasis on intelligibility, explicit connection to other language skills, and sufficient and usable support for teachers (p. 111). They highlighted that the first principle – pronunciation materials emphasizing intelligibility – refers to determining priorities in teaching: what features of pronunciation are more important and thus deserve both teachers’ and learners’ attention. This is in compatibility with Jenkins’ (2000)⁵ development of the Lingua Franca Core (LFC) for pronunciation instruction aiming at intelligibility (which will be discussed in the following section). The second principle is in line with Hinkel’s (2006) three principles for pronunciation instruction: teaching pronunciation in context and connected to speaking, serving communicative purposes, and based on realistic language (as cited in Levis & Sonsaat, 2016, p. 111)¹⁶. Such principles could be said to be in agreement with Rose and Galloway’s (2019)¹⁹ assertion that the language learners are exposed to in the classroom should be “truly an authentic depiction” of what they are going to encounter in their real-life communication (p. 135).

The Lingua Franca Core (LFC)

The LFC, developed by Jenkins (2000)⁵, addresses four major areas in pronunciation in helping ELF learners and users to be mutually intelligible, and to avoid communication breakdowns: (most) individual consonant sounds, consonant clusters, vowels, and

259 nuclear stress. The establishment of the LFC was
 260 based on the empirical work of “interactional speech
 261 data” and on realistic ways of natural interactions
 262 (Jenkins, 2000, p. 131)⁵. She also identified the non-
 263 core features that may not affect one’s intelligibility.
 264 Furthermore, Jenkins (2000)⁵ suggested that the LFC
 265 should not be regarded as a model of pronunciation,
 266 but that it “allows ... individual freedom ... by provid-
 267 ing speakers with the scope both to express their own
 268 identities and to accommodate to their receivers” (p.
 269 158). Galloway and Rose (2015)⁴ remarked that these
 270 features specified in the LFC are imperative for intelli-
 271 gible spoken communication but also define “achiev-
 272 able goals” (p. 151) for learners, and certainly, users
 273 of ELF/GE.

274 The LFC together with its non-core features could be
 275 succinctly summarized as follows:

276 Core features

- 277 • all consonant sounds, except /
- 278 • vowel quality/length contrasts
- 279 • initial and medial consonant clusters
- 280 • nuclear stress production/placement

281 Non-core features

- 282 • consonant phonemes /
- 283 • dark /
- 284 • vowel quality (except for /
- 285 • addition of vowels to consonant clusters
- 286 • features of connected speech, such as elision, as-
 287 similation, and weak forms
- 288 • word stress placement
- 289 • pitch movement/patterns

290 However, both core and non-core items in the LFC
 291 should be reassessed considering learners’ needs and
 292 level of proficiency before being applied to class-
 293 room instruction. Sentence stress, as Jenkins (2000)⁵
 294 stated, is a core feature while word stress is not. Intel-
 295 ligibility may not be affected by incorrect placement
 296 of word stress, in the case of *inCREASE* as a verb and
 297 *INcrease* as a noun, for the sentence context will help
 298 ease any possible problem in understanding. There
 299 has been found no clear positive or negative relation-
 300 ship between word stress and intelligibility. But it
 301 should be noted here that word stress is also the foun-
 302 dation for the appropriate placement of nuclear stress:
 303 sentence stress is unteachable and hence unachievable
 304 with misplaced word stress. Jenkins (2000)⁵ did ad-
 305 mit this when discussing the establishment of the LFC
 306 but still disregarded the significance of the issue, be-
 307 lieving word stress placement could be generalized us-
 308 ing rules. But are there as many exceptions as there are
 309 rules?

On the other hand, nuclear stress, by its nature of be- 310
 ing a suprasegmental feature, is hardly easy for acqui- 311
 sition and production by all learners. This is getting 312
 more and more difficult for learners of lower levels of 313
 language proficiency because they have to strive for 314
 intelligibility in terms of segmental features such as 315
 vowel and consonant sounds. 316

The LFC was not the only thing that Jenkins (2000)⁵ 317
 propounded for pronunciation instruction, but she 318
 also suggested what she called the *five-phase accent* 319
addition program. The *addition* of accent – as oppo- 320
 site to accent reduction – is interpreted as “adding the 321
 [second language to one’s accent] as far as is neces- 322
 sary for mutual phonological intelligibility” (Jenkins, 323
 2000, p. 209)⁵. What the phrase basically refers to is 324
 for ELF learners and users to build on their first lan- 325
 guage accents with English unifying phonological fea- 326
 tures – or the LFC. 327

The aforementioned five-phase accent addition pro- 328
 gram, according to Jenkins (2000)⁵, should be han- 329
 dled by teachers in the classroom, among which the 330
 first is compulsory and the remaining four are op- 331
 tional. The five phases could be summarized as fol- 332
 lows (Jenkins, 2000, pp. 209-210)⁵: 333

- 334 1. Addition of core items to the learners’ produc-
 335 tive and receptive repertoire
- 336 2. Addition of a range of L2 English accents to the
 337 learner’s receptive repertoire
- 338 3. Addition of accommodation skills
- 339 4. Addition of non-core items to the learner’s re-
 340 ceptive repertoire
- 341 5. Addition of a range of L1 English accents to the
 342 learner’s receptive repertoire

Jenkins (2000)⁵ stated that these five phases have been 343
 put in order of importance: the first phase is what 344
 teachers are required to focus on and implement in 345
 classroom techniques. She also stressed the impor- 346
 tance for teachers to undergo training of at the mini- 347
 mum the first four phases. 348

It could be said that the application of the LFC in 349
 the teaching of pronunciation is beneficial in assisting 350
 with learners’ achievement of intelligibility in their 351
 English pronunciation – the main goal of teaching 352
 and learning English pronunciation in today’s con- 353
 text of globalization rather than the wish to attain 354
 native-like pronunciation. The development and im- 355
 plementation of the LFC – which consists of both 356
 segmental and suprasegmental features, nonetheless, 357
 does not completely exclude other features of pronun- 358
 ciation from learners’ receptive and productive re- 359
 sources: they are exposed to such features receptively, 360

361 “with their take-up depending on the sociolinguistic
362 profile of the individual learner” (Jenkins, 2000, p.
363 209)⁵. ELF learners and users – regardless of their
364 first language and culture background – make them-
365 selves internationally intelligible in their communica-
366 tion.

367 **ELF Pronunciation Instruction – Classroom** 368 **Models**

369 It has been clear from the prior review of literature and
370 discussion that ELF/GE-based pronunciation instruc-
371 tion focuses more on intelligibility than on NS com-
372 petence, an aim that has been echoed among ELT ex-
373 perts in materials development. However, there arises
374 an issue of *model* selection for classroom use. NS
375 (standard) accents, as previously stated, are not well
376 situated, whilst the selection of a single accent/variety
377 (or two) is deemed even more complicated among
378 such a wide range of GE varieties available nowadays.
379 Such a “dilemma” may become barriers in inducing
380 changes in the practical pronunciation pedagogy in
381 specific situations.

382 Walker and Zoghbor (2015)²⁰ summarized the three
383 models that could be utilized as models for classroom
384 instruction of pronunciation: existing native-speaker
385 materials, competent ELF users, and the teacher. Due
386 to the absence of materials that feature competent ELF
387 users (at the time of their publication), the first and
388 third options seem to be more applicable in Walker
389 and Zoghbor’s (2015)²⁰ viewpoint.

390 At a later time, Szpyra-Kozłowska (2018)²¹ reviewed
391 the four models of pronunciation models: native, na-
392 tivized, non-native, and multiple models. He ex-
393 amined the major strengths and weaknesses of each
394 model, and then went on to discuss how each has been
395 applied in particular places based on their sociocul-
396 tural backgrounds and features. He further concluded
397 that such a varied implementation of models in differ-
398 ent contexts is “a pedagogic reality” and so not likely
399 to change (p. 244).

400 There seems to have been changes in the way materials
401 are developed and models are selected for classroom
402 use, however, at the time of writing this paper. Text-
403 books published over the past decade (for instance,
404 the *Voices* series by National Geographic Learning)
405 have incorporated different accents and varieties of
406 GE as audio input. Whether or not those materi-
407 als have covered ELF users as the input for pronun-
408 ciation is another point for future discussion, but at
409 least they have attempted to raise learners’ awareness
410 of the fact that English is now globally diverse with
411 vast varieties. That is not to say that pronunciation

412 teachers of all practical situations are urged to fol-
413 low ELF/GE proponents in choosing which models
414 for classroom use – despite scholars’ call for shifts in
415 pronunciation research and teaching (Jenkins, 2000;
416 Kachru, 1992)^{5,22}. Notwithstanding, learners’ needs
417 and preferences should be set as priorities for peda-
418 gogical practices.

419 **ELF Pronunciation Instruction – Suggested** 420 **Classroom Techniques**

421 This section generally was not written to recommend
422 radically new activities and techniques for pronuncia-
423 tion instruction in the classroom, but rather to review
424 what scholars have put forward in teaching pronun-
425 ciation with an ELF/GE standpoint. These are based
426 on a modification of goals and priorities in pronun-
427 ciation and pronunciation instruction. Such traditional
428 activities in pronunciation teaching as dictation, min-
429 imal pairs, drills should still be maintained for class-
430 room use, as echoed by Walker (2010)¹, and Walker
431 and Zoghbor (2015)²⁰. Walker (2010)¹ devoted an
432 entire chapter in his book to a detailed explanation on
433 techniques to teach pronunciation from an ELF per-
434 spective. His suggestions were compatible with the
435 LFC and Jenkins’ (2000)⁵ five-phase accent addition
436 program. In addition, the most recent and detailed
437 description of classroom techniques for pronuncia-
438 tion instruction is offered in the book *Teaching En-
439 glish Pronunciation for a Global World* by Walker and
440 Archer (2024)²³.

441 What differentiates ELF-based approach from tradi-
442 tional ELT lies in the encouragement of awareness-
443 raising activities and accommodation skills. Such
444 activities were suggested by Jenkins (2000)⁵ in the
445 aforementioned five-phase accent addition program.
446 Walker (2010)¹ also supported the use of those activ-
447 ities in his discussion and detailed explanation.

448 Specifically, classroom activities should be saved for
449 raising learners’ awareness of ELE, of the roles of En-
450 glish in this global context, and of the existence of a
451 vast range of accents and varieties of English (Walker,
452 2010)¹. To develop an ELF mindset, learners need to
453 be aware of the differences in the numbers of NSs and
454 NNSs, as well as the type of interactions (with NSs
455 or with NNSs) they are more likely to be engaged in.
456 Learners, additionally, should appreciate the signifi-
457 cance of English (and certainly ELF) in national and
458 global transactions in all fields such as business and
459 tourism. Last but not least, learners should start to
460 recognize that accent variation, amid globalization, is
461 an obvious and normal phenomenon, and that atti-
462 tudes towards accents “are more often based on feel-
463 ings than on rational arguments” (Walker, 2010, p.
464 75)¹.

465 Just as people may not enthusiastically take to the
 466 new goal of pronunciation teaching, learners may not
 467 either accept the idea of studying pronunciation to
 468 be intelligible. Intelligibility should be aimed at in
 469 the classroom, and learning activities should be centered
 470 around raising learners' awareness of international
 471 intelligibility in pronunciation. Only among
 472 older learners could such be appropriate and helpful:
 473 very young and young learners should not be
 474 exposed to the afore-mentioned activities and techniques.
 475 An improper understanding and realization of the goal
 476 could reduce their learning incentive
 477 (Walker & Archer, 2024)²³.

478 The implementation of accommodation skills – or
 479 phonological accommodation – is another focus of
 480 ELF-oriented classroom instructions. According to
 481 Giles and Coupland (1991)²⁴, Communication Accommodation
 482 Theory (CAT) believes that humans' verbal (and non-verbal)
 483 behavior can change in accordance with the situation, the
 484 topic, and the interlocutor through the application of three
 485 strategies: convergence, divergence, and maintenance. Jenkins
 486 (2000)⁵ explored the relation between such strategies in
 487 CAT and her ideas of phonological accommodation through
 488 the three motivations: solidarity amongst speakers, communicative
 489 efficiency, and identity maintenance. In simpler words,
 490 teachers of English need to introduce the skills of receptive
 491 phonological accommodation so that learners can deal with
 492 English in different accents (Walker & Archer, 2024)²³.
 493 Learners of a higher level of proficiency, additionally,
 494 should have the ability to adjust their pronunciation to ease
 495 their communication with those unfamiliar to their own
 496 accents, which is regarded as productive accommodation^c.
 497 All such contributed to the necessity of introducing
 498 phonological accommodation skills to students so that they
 499 in their real-life interactions can employ such skills for
 500 mutually/internationally intelligible spoken communication.

505 **ELF-Oriented Assessment of Pronunciation**

506
 507 It should be worth again mentioning at this point
 508 that the aforesaid discussion of ELF-oriented classroom
 509 techniques does not suggest a dismissal of previous
 510 and/or current ways in pronunciation instruction. The
 511 assessment practice of pronunciation, for that reason,
 512 should not be substantially altered. The focus and goal
 513 of pronunciation instruction has been

^cA thorough explanation for ideas and how to implement such classroom activities could be found in the book by Walker and Archer (2024).

514 changed, requiring a subsequent modification of assessment –
 515 echoed by Walker (2010)¹ confirmation of “reappraisal and
 516 evolution than with dismissal and revolution” (p. 146).
 517

518 According to Walker (2010)¹, English pronunciation
 519 assessment should be conducted in different dimensions:
 520 its components, its construct, and its purpose. Pronunciation,
 521 firstly, should be assessed in both learners' knowledge and
 522 skills: what they understand about sounds and how they
 523 produce such. Secondly, assessment should be performed in
 524 both perception and production: whether learners recognize
 525 sounds and speech (through listening) and whether they can
 526 make sounds recognizable (in speaking). The third dimension
 527 of assessment is the incorporation of pronunciation using
 528 discrete testing (focusing on pronunciation only – vowel
 529 sounds for instance) or integrative testing (integrating
 530 pronunciation in speaking and listening – in communication).
 531 Finally, both diagnostic tests and achievement tests can
 532 focus on pronunciation depending on which type of data tests
 533 aim at: understanding learners' level of language proficiency
 534 or deciding whether learners have achieved pre-set learning
 535 outcomes.
 536

537 It is important to note that whichever of the four dimensions
 538 to focus on, assessment of pronunciation should be undertaken
 539 embracing the principles of assessment. Moreover, the goal
 540 and priority of pronunciation – mutual/international
 541 intelligibility – should still be set as priority. That is to say
 542 that native speaker competence should not be seen as
 543 assessment criteria, or that having an accent should not be
 544 deemed an interference or a lack of competence. The LFC,
 545 again, should be applied during the process.
 546

548 **CONCLUSION**

549 Language changes together with society. The English language
 550 changes and develops throughout history: from a language
 551 of a small European island to the global lingua franca
 552 nowadays (Galloway & Rose, 2015)⁴. The changes in
 553 language in general and English in particular reflect not
 554 only social transformation but also actual and practical
 555 needs and aspects of communication. The teaching and
 556 learning of such a dynamic language, therefore, need to
 557 change to demonstrate the way language is used in
 558 real-life communication.
 559

560 This paper reviewed the changes in priorities of pronunciation
 561 instruction and materials, classroom techniques to teach
 562 pronunciation, as well as assessment practices from the
 563 perspectives of ELF and GE. The purpose of each selection
 564 and application is not for

565 dismissal and revolution of whatever has been in prac-
 566 tice, but for reappraisal, modification, and evolution –
 567 with a view to assisting learners to become competent
 568 ELF users in global communication. What has hith-
 569 erto remained prominent is the priority and goal of
 570 the teaching of pronunciation: not developing a na-
 571 tive speaker competence but achieving international
 572 intelligibility.

573 **BIODATA**

574 Dang Thi Van Di currently works as a lecturer at the
 575 Faculty of English Linguistics and Literature, Uni-
 576 versity of Social Sciences and Humanities. Her re-
 577 search interests focus on pronunciation pedagogy, in-
 578 ternational varieties of English, materials develop-
 579 ment, and language assessment.
